The image displays a musical score for the song "The Wind" by Gustav Mahler. It includes a vocal line and a guitar accompaniment. The vocal line is written in a treble clef with a key signature of one sharp (F#) and a 3/4 time signature. The guitar accompaniment is written in a standard six-string format with fret numbers and bar lines. The score includes various musical notations such as triplets, natural harmonics (N.H.), and slurs. The guitar part features a mix of chords and single notes, with some fret numbers indicating specific positions on the fretboard. The overall style is a blend of classical and folk influences, characteristic of Mahler's early work.

***Dance Of The Last Rhino* by Jon Gomm - Performance Notes**

For this song, Wilma was tuned to A1 G2 C2 E3 A3 C4, a pretty low tuning which works best with heavy gauge strings. I use my signature 14-68 gauge strings made by Newtowne in Derbyshire, England, and you can order them online. If you're using more normal strings, you could try tuning up a wholestep, which would give you B A D F# B D, from low to high.

Referring closely to the official video at [youtube.com/jongomm](https://www.youtube.com/jongomm) will help you learn this song.

ALL PERCUSSION SHOULD BE PLAYED SOFTLY. This will improve your tone and protect your instrument.

Note 1 Firstly, the rhythm here looks more complex than it is. Actually, we're just playing constant semiquavers (16th notes) with a swing feel. But I've written them as a quaver and semiquaver grouped into a triplet, which is still totally accurate, but it also makes the left and right hands sync up more easily later in the transcription. You'll see...

Each 'x' on the 1st string represents a scratch: the left hand thumbnail scratching the wood of the soundboard, somewhere roughly above the 20th fret. **THIS WILL DAMAGE YOUR GUITAR'S FINISH!** (If you care about such things, try attaching a thin sheet of unfinished wood to the soundboard, to use as a "scratch pad". I have one on a spare guitar, I used some wood from a bento box (japanese lunch box) I got from a takeout restaurant, and attached it with double-sided tape.)

You can see that they are alternate "down, up" scratches, but in reality it's almost a circular motion. Notice in the musical notation that some of the scratches are slightly accented. Adding this accenting will really help the groove.

Note 2 The right hand joins in with some percussion here, so here's what each 'x' represents:

'x' on the 6th string = Kick Drum: Drop your wrist ('w') against the soundboard below and to the right of the bridge. You're aiming for a low, bassy sound.

'x' on the 3rd string = Bongo, below strings: Tap the soundboard with either the tip of your middle finger 'm', or the side of your thumb, 'p', somewhere below the strings. This can be on the upper bout (over nearer the neck) or the lower bout (nearer the bridge end), whatever is convenient to reach the next percussion hit.

'x' on the 4th string = Bongo, above strings: As above, but above the strings. In this song, these hits are always with the side of the thumb, 'p', and always on the upper bout. They're played roughly above the 18th fret.

'x' on all 6 strings = String Slap: Slap the strings against the frets, using the flat part of all four straightened fingers ('s'). I slap the strings in the area roughly between the 15th and 20th frets.

'x' on the 1st string = High Clap: Slap the side of the guitar, below and to the right of the bridge, using the flat part of all four fingers ('s'). We're after a high, sharp clap effect.

'x' with ~~~ vibrato marking above = Bongo Roll: Drum your fingers quickly in turn against the soundboard, starting with the little finger, ('c'), then 3rd, 2nd and 1st. You can use the tip of your fingers (so it's like you're bored, drumming your fingers on a desk) or the back of the fingernails (so it's like a 'rasgueado' frail). Do this against the wood roughly below the soundhole.

'x' on the 2nd string = Low Clap: Slap the side of the guitar, on the curve of the lower bout roughly below the 19th fret, using the flat of all four fingers ('s'). If you have a cutaway, you're slapping as close to it as possible. This gives a clap with a slightly less piercing tone.

Make sure you learn the right hand part on its own before gradually reintroducing the left hand scratching.

Note 3 The left hand intermittently breaks off from the scratching to play some actual notes! Please note, the left hand is in the "inverted", or over the neck, position. The notes are all tapped, your right hand is too busy to pluck. :)

Note 4 A weird technique here. Hammer on the 9th fret with the 1st finger, slide up two frets, then with the 1st finger held down (for anchoring your hand position as much as anything) pluck the 1st and 2nd strings with a little upward strum of the 3rd finger. (Remember the left hand is still inverted!) Freaky.

Note 5 The right hand part changes here (the left hand continues as before). Some of the percussive hits are replaced with tapped harmonics. I get the harmonic pair on the 1st and 2nd strings with my index finger in a barre (or a kind of fake diagonal barre!). However using this for the 3rd and 4th string pair is too innaccurate, so I use the tips of my 1st and 2nd fingers. I'm still not *that* accurate with it, but it's better!

The technique here (called "tapped", or "slapped" harmonics), if you've not encountered it before, is to bounce the string against the fret shown (here the 12th or 19th frets) so a harmonic sounds. Imagine your strings are electrified, and as soon as you hit them your hand flies away!

Note 6 The relatively normal fingerpicking section starts here. Phew! Left hand goes back under the neck in the conventional position, and the first note is plucked with the thumb ('p').

Note 7 (Bar 13) OK, I've tried something new for the transcription method here - we

have some X markings just above and below the strings. They have no rhythm marked, because their rhythm is obvious (I'm hoping!). There is always a little semiquaver gap in the music for them to slot into, so hopefully you don't need the rhythm notated, as there's nowhere else these hits could fit!

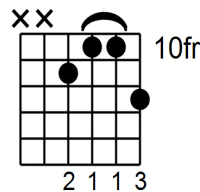

X below the 6th string = Bass Drum: Drop your wrist ('w') against the soundboard above the strings, just wherever is comfortable for your playing position.

X above the 1st string = Bongo: Tap your middle finger 'm' against the soundboard, again wherever is comfortable for your playing position. I tap just below the soundhole (try not to miss and fall inside your guitar!)

Any other x's marked on the strings here - for example the vertical row of them on the strings themselves - that's a string slap. Drop your right hand fingers and thumb gently against the strings to get a percussive click. It doesn't really matter which string or strings you hit, but aiming for the ones notated will give you the best hand position for plucking the next notes.

Note 8 The 5th fret is half-barred, with the tip of the 1st finger holding down the 6th, 5th and 4th strings, but the finger is also bent back slightly so you can get the open 2nd string.

Note 9 Some plucked "touch harmonics" here. (Sometimes also called "classical harmonics" or "harp harmonics".) Firstly, hold this chord shape:

Now pluck the 2nd string with your 3rd finger ('a'). Next we have the first harmonic - touch the 4th string very lightly with your straight, outstretched index finger, at the 23rd fret. Now your guitar probably doesn't have a 23rd fret, Wilma certainly doesn't. So you have to guess where that is. Now pluck the string with your thumbnail, and immediately stop touching it with your index finger. Hopefully, you got a harmonic. If you get a dead note, you need to move the point of contact with your index finger (you guessed wrong about the location of that imaginary 23rd fret!) If you get a regular 11th fret note, you took your finger away too soon.

These are tricky enough without alternating between these touch harmonics and regular plucked notes, as we have to here! If this technique is new to you, you can always try one of my other songs where this technique is more of a feature, for example in the Intro section of the song *Telepathy*.

Note 10 The Chorus section. OK, let's look at each hand separately...

Left hand: The left hand is playing a fairly simple "on off on off" hammer and pull-off ostinato, only complicated by the occasional slide up and back. You may find it tricky to slide one note up one fret and another up two frets simultaneously, because it changes the little chord shape you're playing. The trick is to check the left hand fingering in the musical notation (1 and 3), and use it!

Right hand: OK, we have some simple chord shapes hammered-on (these are quite short or *staccato*) and some percussion too. The 'x' on the 4th string represents a "Bongo, above strings", as it did in the intro (notice the fingering in the musical notation above the Tab - it's played with the side of the thumb, 'p'). You'll be hitting the soundboard above the fretboard, near the far left edge of the guitar body.

The stack of X's on the 6th, 5th and 4th strings is a string slap. This time I'm using the flat part of my straightened middle and index fingers. Try not to hit any other strings, or you'll accidentally mute the left hand part!

Note 11 The Bridge section starts with an upward rake (from 1st to 6th string) using the little finger of the right hand. The right hand then jumps up to the scratching position, on the soundboard somewhere roughly above the 20th fret. The remaining left hand notes are all played with hammer-ons and pull-offs, no plucking. :)

Note 12 This triplet is just regular harmonics. I sometimes play this with a partial barre with the 3rd finger, but sometimes I'll switch before the second or third harmonic to my first finger, to make the subsequent jump up to the 12th fret easier.

Note 13 At this point the scratching digit has to switch from right thumb to left thumb. This is possibly one of the weirdest moves you will ever have to practise! I do it on a downbeat, to make it easier, and halfway through the bar.

OK, that should cover everything, but if you have any questions, please post them on my wall at facebook.com/jongommofficial or email info@jongomm.com with the subject "Tab question for Jon". We get a high volume of requests, so please be patient. Have fun and don't hurt yourself, or your guitar. :)
